**AMENDMENTS TO THE SPECIFICATION**

Please replace paragraph [0027] with the following amended paragraph:

[0027] When a call 6 arrives at the first computer system, the service is connected between the calling subscriber and the desired contact. That connection is effected by executing transactions in the first computer system. One or more transactions concerns price setting and a transfer of the price setting procedure to the second computer system. The second computer system receives transaction references from the first computer system, which causes the second computer system 2 to fetch transaction references relating to price setting from its communications database 4. Those transactions have been exemplified in Figure 1 by the references TRS.10 and ~~TRS.11~~ TRS.12.
